

The fitting below is a specially manufactured pendant complete with an integrated Metal Halide down light. The down light supplied by a third party is fitted into the plate inside the reflector with the control gear fitted atop in the cylinder. The unit is constructed from aluminium and powder coated black externally and white internally. The flex is high temperature black silicon cable and is secured by heavy duty plastic cable clamps.

Elettra Products are Australian owned and manufactured.

## Satelite with Integrated Metal Halide D/L

Overall length of the fitting is 400mm and the diameter is 370mm. It is suspended by 3 core heavy duty silicon flex. The ballast housing is 120mm diameter by 150mm high. The top of the ballast housing is fitted with perforated steel sheet for added heat convection.
