

In recent months several new products have been added to our range as well as manufacturing a range of specialist and one off designs for our customers that may be of interest. A few have been highlighted below which you may not be aware of and can be viewed in more detail on our website at www.elettra.com.au

CENTURI PENDANT

This impressive large pendant measures 1.1 metres wide and comes standard with a 4 light E27 Hub. Each of the lamps is fitted with a swivel allowing adjustment of the globe position. It accepts most ES Low energy and LED globe options. There is also an optional acrylic diffuser available if required. The standard rod length is 500mm though this can be extended if required. It is also available in a 3 lite 11 Watt Osram LED version. The size and obvious variations of this fitting including the full range of our standard powder coats means it is a made to order item and requires a little more lead time than the average fitting.

KEWPRA WALL BRACKET

The Kewpra up light wall bracket is available with both a copper or aluminium reflector and comes standard with an opal diffuser. It is fixed through fasteners in the top of the fitting. As a consequence there are no visible fixing screws from below giving a clean modern finish. The light source is a 13W LED and the overall dimensions of 150mm x 160mm make it a very compact fitting. It is available in all our standard powder coat finishes.

PLAZA LOW VOLTAGE EXTERIOR

The Plaza mini exterior wall bracket is made with powder coated or brushed aluminium reflectors and marine grade 316 stainless steel back plate that is powder coated black. The marine grade stainless makes this fitting very suitable to beach side proximity and will not rust.

The fitting comes fitted with a frosted glass diffuser top and bottom and a 12 Volt ceramic Stucci lamp holder.

METRO 8 SPECIAL

This metro 8 special is fitted with 12 volt LED strip and is powder coated red inside. The exterior is brushed aluminium with a clear lacquer. It is 1.5 metres long and has a series of randomly drilled 10mm holes throughout the length of the tube highlighting its red interior when lit. It is suspended with red cloth flex and the driver is fitted within the ceiling canopy.

Elettra manufactures and finishes products on site and maintains a large range of components and manufacturing processes aligning the business to bespoke manufacture and design.
